

**NAME**

phosphor – display text like on a phosphorescent CRT terminal

**SYNOPSIS**

```
phosphor [ { -c | --case } style ] [ -d | --delay delay ]
[ --demo ] [ filename [ filename ... ] ]
```

**DESCRIPTION**

**phosphor** displays text in a word-by-word animation as on a slow CRT terminal. By default, the text is converted to uppercase.

Text can be read from files or from standard input.

**OPTIONS**

**-c *style*, --case *style***

Case mapping of letters. *style* can be one of:

l | lower

All characters are mapped to lowercase.

u | upper

All characters are mapped to uppercase.

n | normal

No case conversion is done.

r | reverse

Uppercase characters are displayed in inverse; lowercase characters are mapped to uppercase.

u | underscore

Uppercase characters are underscored; lowercase characters are mapped to uppercase. This is the default.

**-d *delay*, --delay *delay***

The delay in (fractional) seconds between words (default: 0.03)

**--demo**

Use a fixed demo text. No other input will be read.

*filename* [ *filename* ... ]

Files whose content should be displayed. If none are specified, read from standard input.
